

Aura Air + ESG

With a desire to live in a healthier and more sustainable environment, Aura Air has developed the world's leading indoor air management system that filters your indoor air while constantly monitoring and presenting its quality.

While keeping you informed about your environment, Aura Air also monitors and presents outdoor air quality, weather and provides you with a holistic solution.

Aura provides a platform to manage health & Wellness, safety, and sustainability.

Our value

- ✓ Increasing air quality reduces the need for outside airflow, thereby optimizing energy consumption.
- ✓ Integrates into Building management systems (BMS), resulting in optimal Heating, ventilation, and air conditioning (HVAC) systems usage based on real-time measurements.
- ✓ Reduce greenhouse gas emissions to reduce your carbon footprint.
- ✓ Creating a healthier, safer, and cleaner indoor environment to reduce the risk of infection and sick days.
- ✓ Controlling, managing, and assessing the risks associated with air quality is a sign of resilient leadership.
- ✓ Award up to 7 points for LEED certification and 11 points for WELL standard, and boost your ESG strategy.

Improve Energy efficiency

Reduce infection risk and sick days

Benefit full connectivity and integration capabilities for building management systems

Earn green building and LEED points
