24/7 Monitoring- Indoor & Outdoor

Smart sensors provide real-time data and analysis, helping you optimize your settings for your business needs.

Pre-Filter

The first layer of the process targets large particles, including dust, pollen, insects, and animal hair.

HEPA Ray-Filter™

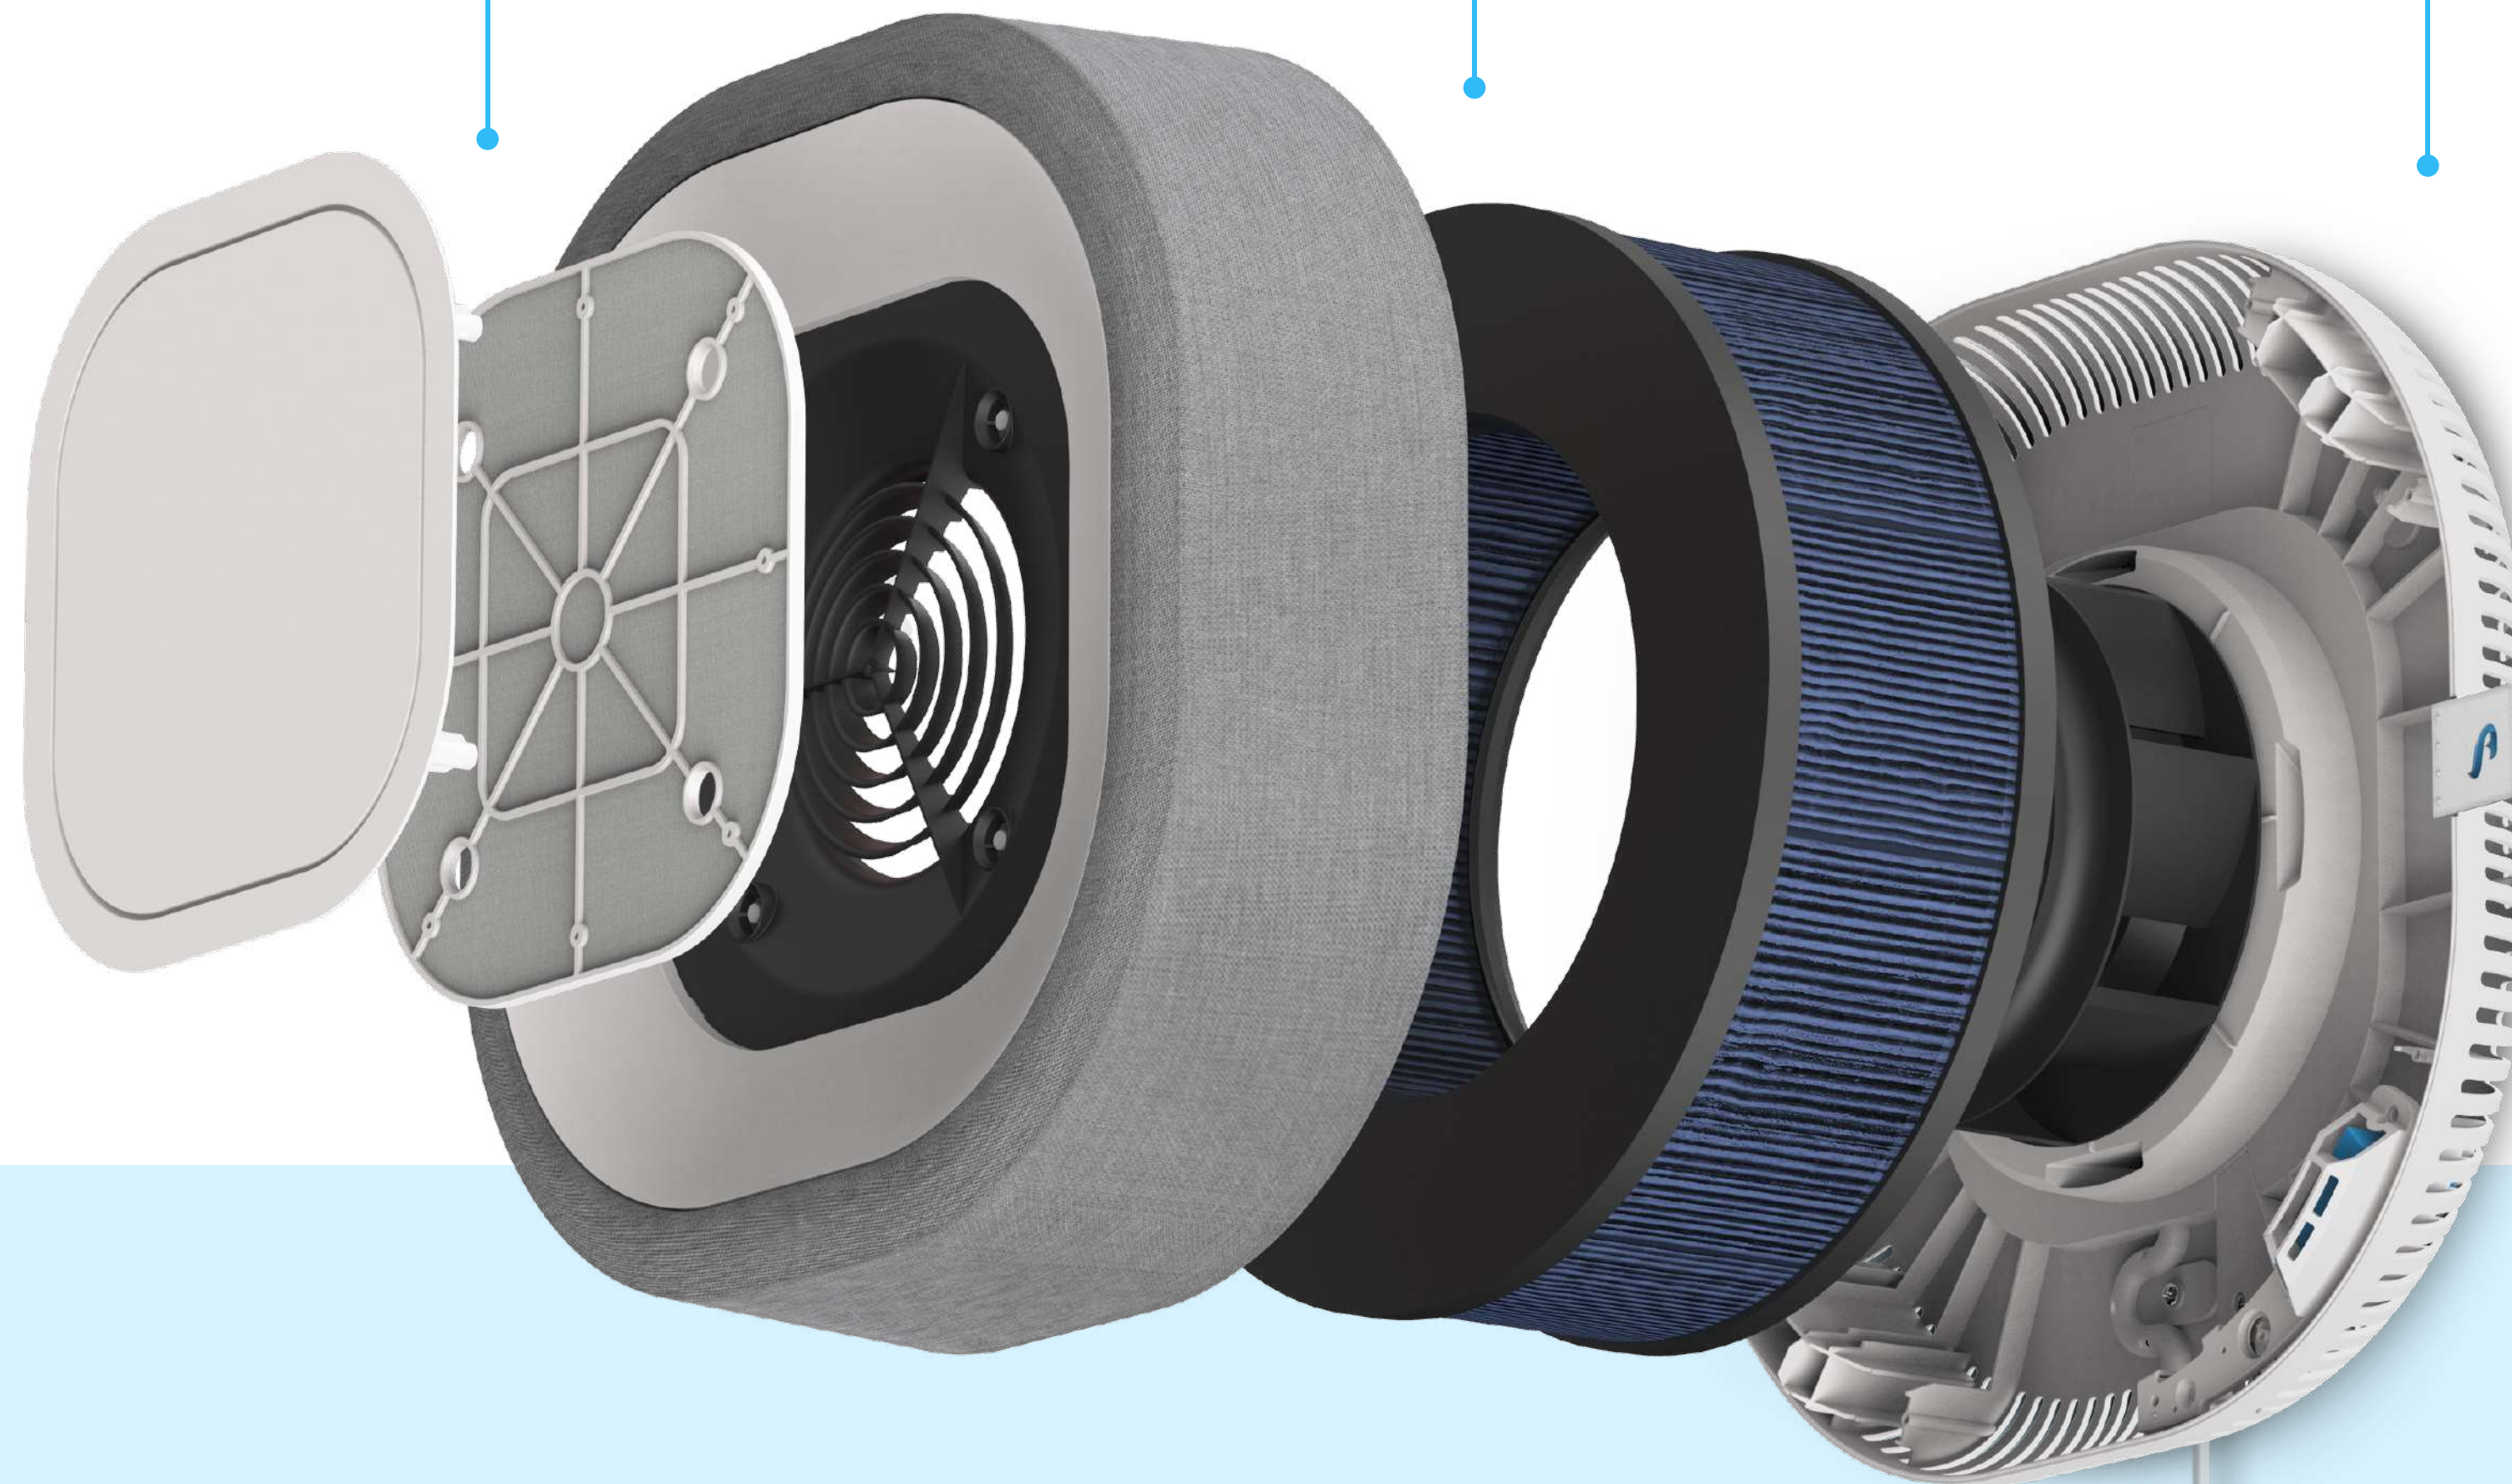

Our patented HEPA Ray Filter consists of 3 unique antibacterial layers that target fine particles (PM 2.5 and 10), germs, odors, bacteria, viruses, fungus, and mold spores.

UVC LEDs

Exterminates bacteria, viruses, and parasites by destroying their integral membrane protein.

The Sterionizer™

Creates pure air, just like in nature, by releasing positive and negative ions. It freshens up your indoor space and removes any remaining harmful pollutants.

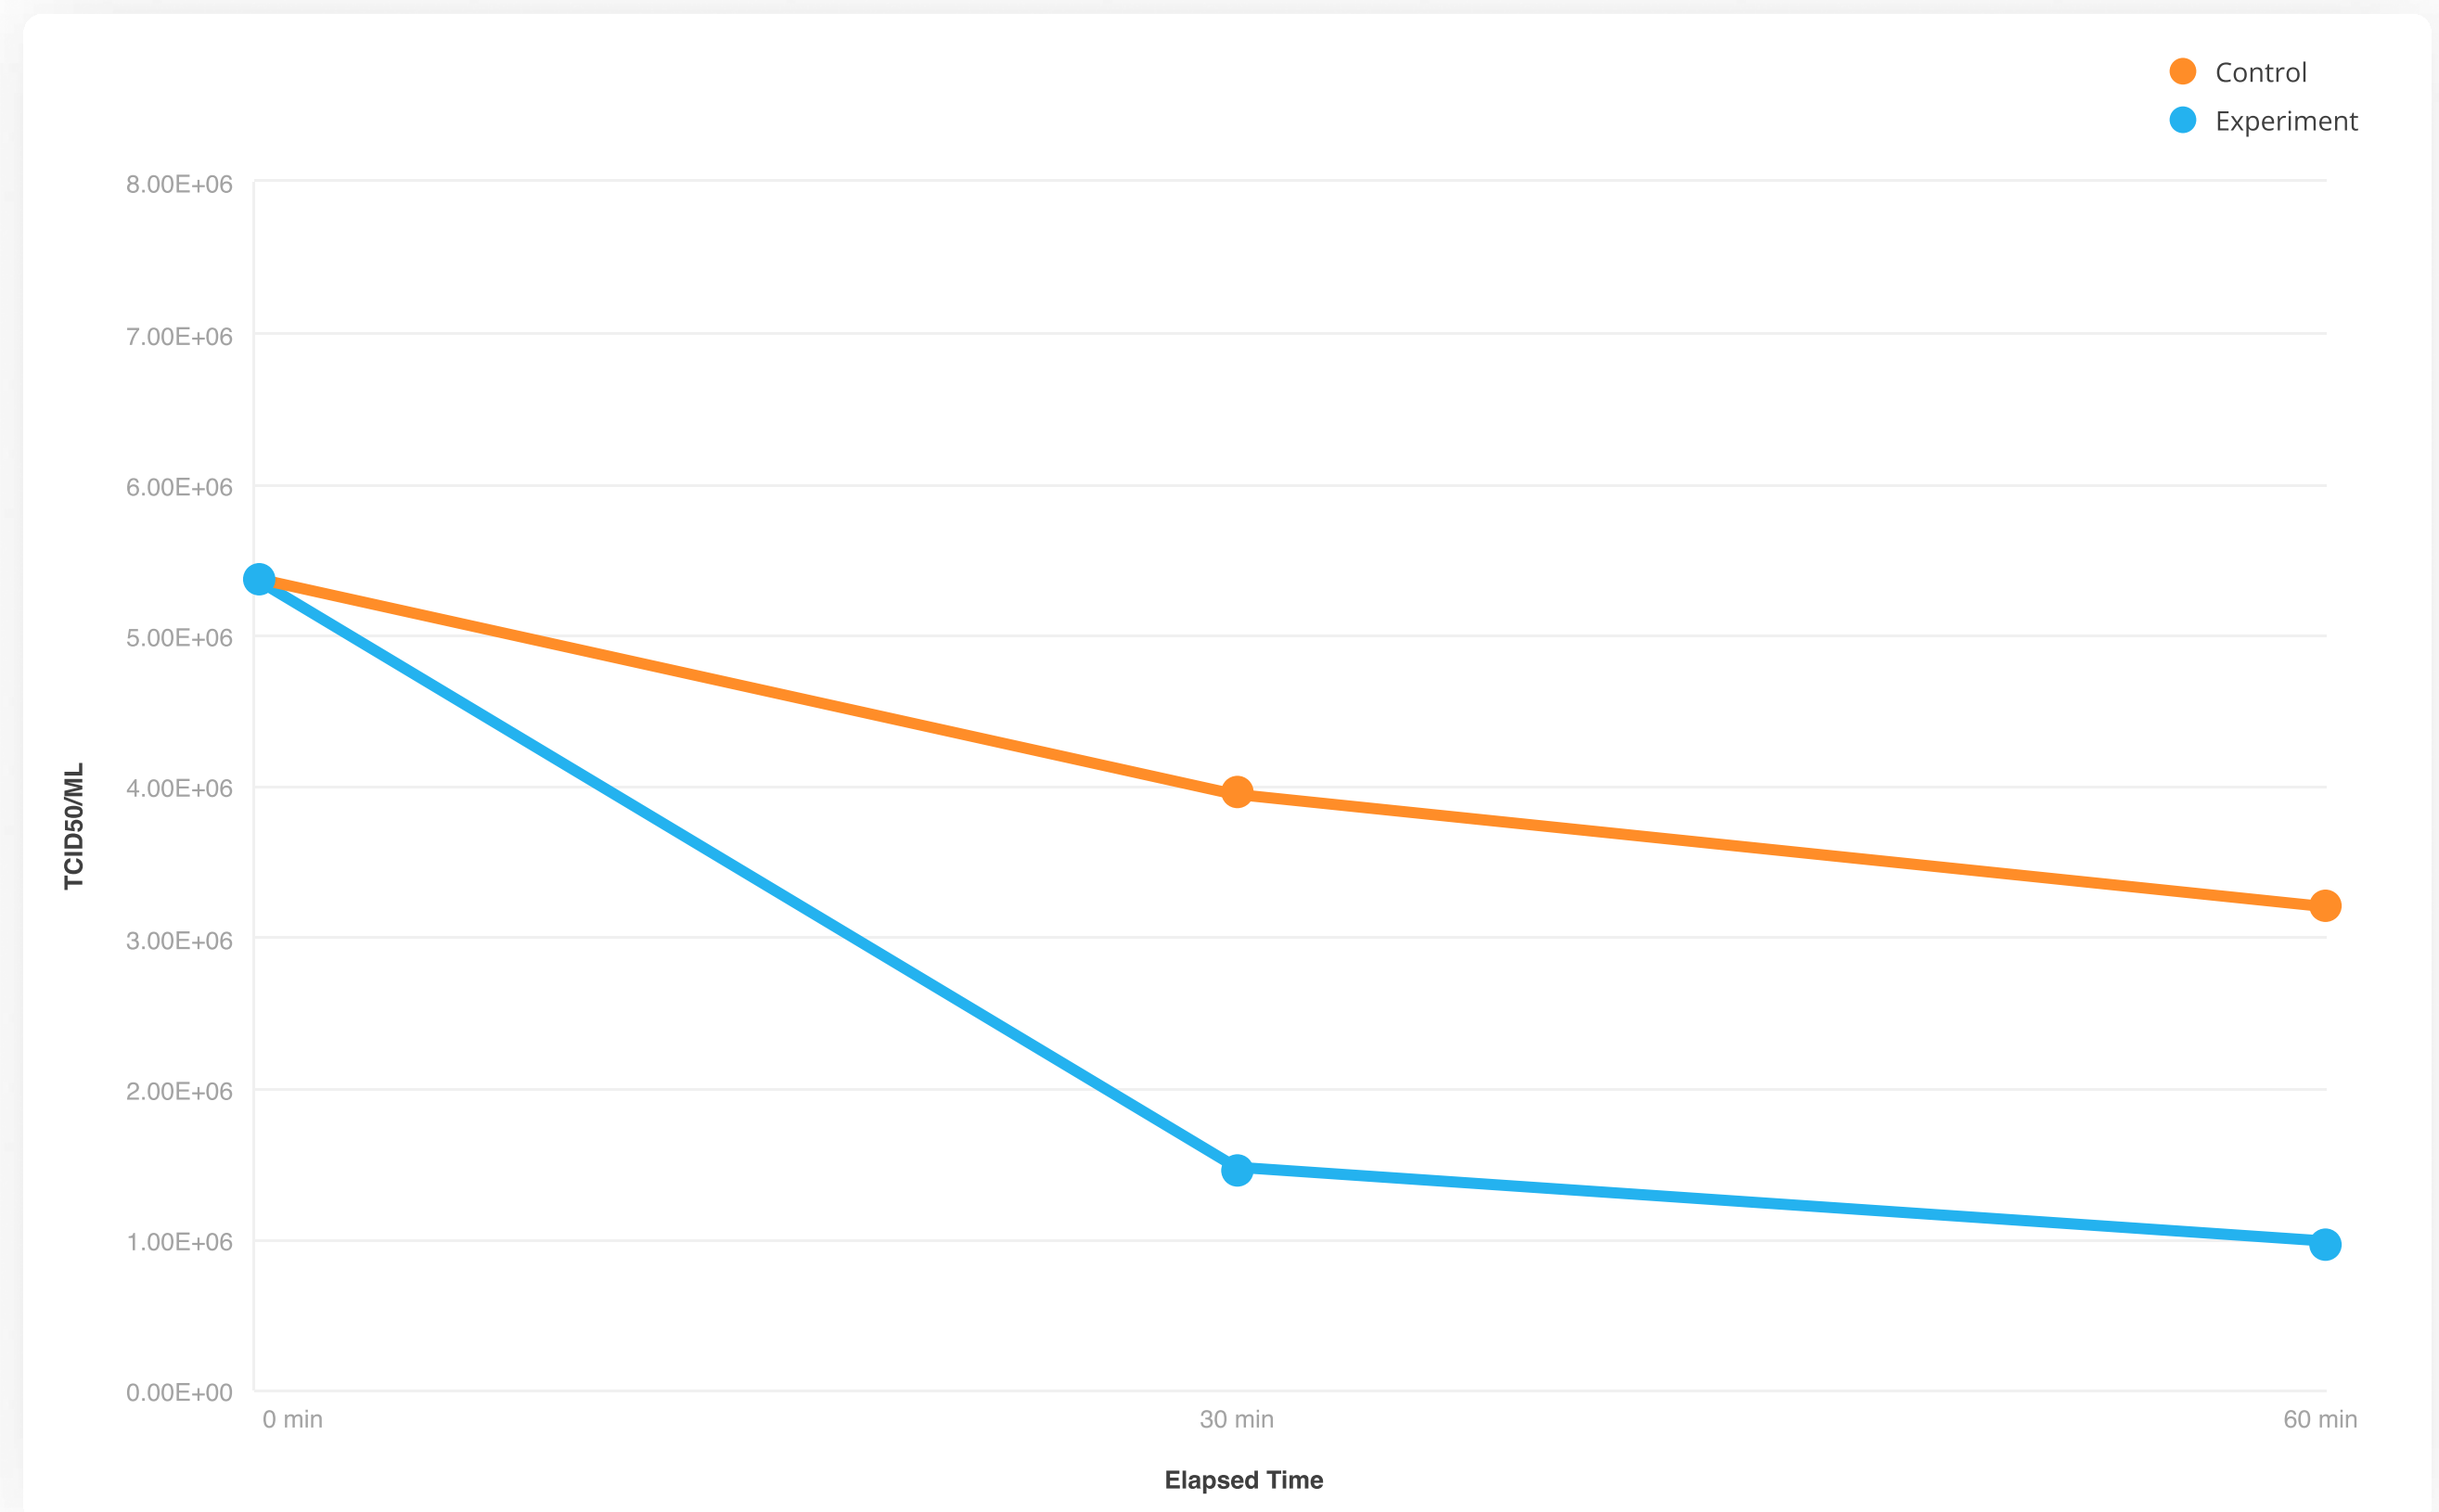

The Future of Air Quality Research

99.998%
of Sars-CoV-2
Was Eliminated
in 60 Minutes

Aura Air Neutralization of Aerosolized SARS-CoV-2
