

RVP-R-SL

VAV ROUND VARIABLE FLOW REGULATOR FOR SMAYLAB SYSTEMS

Description:

VAV variable flow regulator with round cross-section, operating from 1 m/s and equipped with the actuator and metering panel. Specifically for the SmayLab system.

Table 1. Essential parameters.

Essential parameters	
Function	VAV
Operating range	1–8 m/s or 2–12 m/s (details in Table 2)
Material	Galvanised (DX51D+Z275) or stainless steel 1.4301
Operating pressure range	50–1000Pa
Air tightness class	B3/C3
Control precision	10%
Operating temperature range	0–50 °C

Intended Use

VAV regulators are used for the automatic control of airflow in ventilation systems in laboratories and clean rooms covered by the SmayLab system. RVP-R-SL regulators can be made in two versions that differ in operating speed. For the standard version the shift time of the regulator damper is 150 seconds, while for the fast version it is only 3 seconds.

Design

The housing and shutter of the regulator damper are made of galvanised steel sheet or, if a special order, of 1.4301 stainless steel. The damper baffle is equipped with a rubber seal, which ensures air tightness when the shutter is fully closed. The regulator, in accordance with PN-EN1751, meets the requirements of B3 (for Dn 100–125 mm) or C3 (for Dn 160–500 mm) air tightness class. Optionally, the RVP-R-SL are fitted with thermal and noise insulation – RVP-Rt-SL.

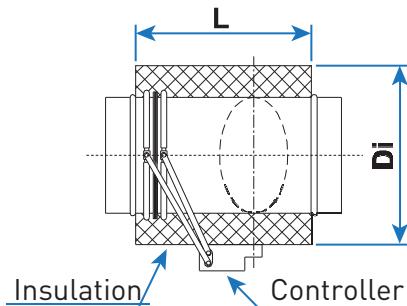

Figure 3. VAV air flow regulator, type: RVP-R-SL (with insulation).

Typical Dimensions and Application Range

Table 2. Typical dimensions and application range.

Dn [mm]	Di [mm]	L [mm]	Lc [mm]	Operating range Vmin–Vmax [m³/h], range 1	Operating range Vmin–Vmax [m³/h], range 2
100	200	265	365	28–226	55–339
125	225	265	365	44–353	90–530
160	260	280	380	72–579	145–869
200	300	300	400	113–905	225–1357
250	350	350	450	177–1414	350–2121
315	415	415	515	281–2244	560–3367
400	500	500	600	452–3619	900–3619
500	600	600	700	707–5655	1400–8482

Installation Recommendations

To ensure proper operation of the device, please observe the following rules when installing the regulators:

- Straight section length before the regulator 2D
- Straight section length after the regulator 1D.
- If a differential pressure static sensor is being used, the only permitted way of installation is such that the plane where the sensor is attached is positioned vertically.

The electrical connection of the measurement, control and actuating unit should be made in accordance with the diagram included in the documentation enclosed with the device by a properly qualified person.

Pressure Drop

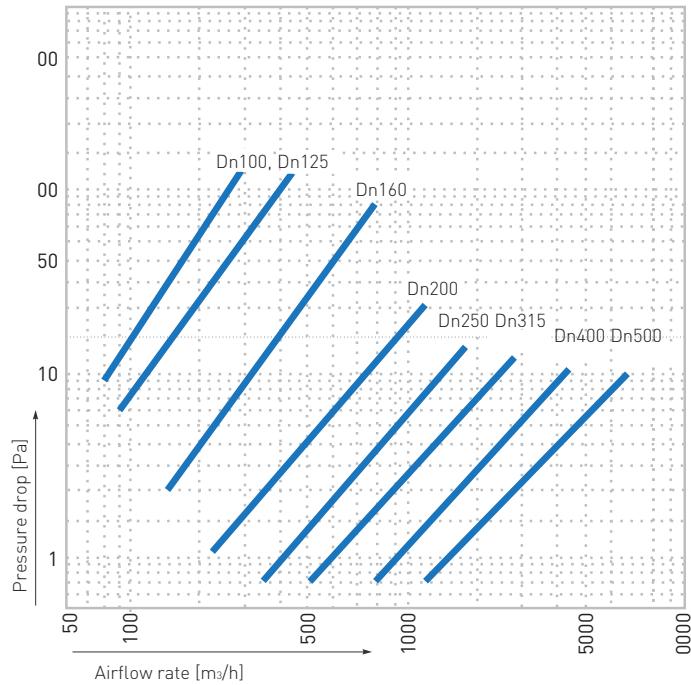

Chart 1. Pressure drop in RVP-R-SL regulator when the control damper is fully open.

RVP-R-SL regulators have undergone and passed analytical tests for the arrangement of the measuring elements to reduce calibration error margin of the airflow rate that is being controlled. This has been the basis for the master's thesis defended in 2005, at the AGH University of Science and Technology in Krakow, Poland.

The airflow settings are set at the factory by the manufacturer and may not be modified by any unauthorised personnel.

Technical Data

the room and ceiling attenuation for a reference room, which has been assumed to be 8 dB.

The actual parameters may vary, depending on the conditions.

For the sound performance data for other pressures and flow rates, including the sound power level in individual frequency bands, please contact the SMAY engineering department.

Regulation and Actuating System

This unit is controlled by the SmayLab system controller.

The regulators are manufactured in two versions.

A) Standard automation design – a standard version of RVP-P-SL.

(with the total shift time of the shutter equal to 150 seconds) and is used for local exhaust systems, exhaust arms, etc.

VAV – Compact

In this version, the regulation and actuating system of the device consists of the differential pressure dynamic sensor, actuator and damper drive. It constitutes a compact unit with the designation GDB181.1E and is mounted to the RVP regulator depending on the nominal diameter Dn.

B) High-speed automation design – a standard version of the RVP-P-SL (with the total shift time of the shutter equal to 3 seconds) and is used for air supply, air exhaust and fume ventilation hoods.

In this version, the regulation and actuating system of the device consists of a differential pressure static sensor with an actuator with the designation GAP191.1E. All the components are mounted to the RVP regulator depending on the nominal diameter Dn.

I
The electrical connections of the units should be made in accordance with the automation diagram included in the documentation of the designed system by a properly qualified person.

Table 4. Actuator technical data.

Technical Data		GDB 181.1E	GAP 191.1E
Nominal voltage		24 V AC, 50/60 Hz	24 V AC/DC (with QBM 3460-1)
Power consumption	Duty	2.5 [W]	22 [W]
	Idle	0.5 [W]	5 [W]
	Rated power	3 [VA]	22 [W]
Torque		5 [Nm] (10 [Nm])	6 [Nm]
Run time from 0 to 100%		150 secs	2 secs
Connection diagram		SmayLab diagram	SmayLab diagram

Additional technical data is provided in the data sheets of individual actuators and in the full data sheet.

RVP-R-SL - VAV Round Variable Flow Regulator for SmayLab Systems

When ordering, please provide information as follows:

RVP-R <X> - <I> - SL - <D> - <V_{MAX}> / <V_{MIN}> - <Ts> - <Z> - <P>

Where:

X	Measuring element*
L – Metering panel	
I	Insulation*
None – non-insulated	
	t – Acoustic insulation
D	Diameter [mm]
V_{MAX}	Maximum airflow rate [m ³ /h]
V_{MIN}	Minimum airflow rate [m ³ /h]
Ts	Actuator* (in the case of controllers for fume hoods it is possible to order a controller with a GAP191.1E actuator only)
GAP – GAP191.1E (actuator 3s), QBM-3460-1 (pressure transmitter)	
GDB – GDB181.1E (actuator 150s)	

Z	Application
N	– Air supply
W	– Exhaust
O	– Local exhaust system
D	– Fume hood
P	Material*
None – Galvanised steel	
	SN – Stainless steel

*Optional values – if blank, default values will be used.

Example product marking: **RVP-RLt-SL-250-1450/420-GAP-0-SN**
